

# Corrections to ‘Morphing of Triangular Meshes in Shape Space’

On the bottom of page 5, the number of coordinates of  $p$  that describe the outer normal directions is  $2n - 4$ . This number should then also be entered in the following formula.

On top of page 6, the interpolation formula for the edge lengths should be  $p_k^{(t)} = (1 - t)p_k^{(0)} + tp_k^{(1)}$ .
